Ridge height	12.0M
Roof Pitch	18°
Roof Cover Material	850gsm White or Colored PVC or Clear PVC
Side Walls Material	650gsm white or Colored PVC or Clear PVC
Main Profile	300 x 120 x 5.0mm (4-channel) 350 x 125 x 6.0mm (4-channel)
Max Allowed Windspeed	100km/hr 0.5kn/m2
Eave Connection	Hot-dip galvanized steel insert
Framework material	Hard pressed extruded aluminum 6061/T6 (13HW)

Several factors affecting the price of the tent :

1. The impact of raw materials on the price of the tent

The first is the procurement of raw materials, the raw materials of the tent are mainly composed of aluminum profiles, steel, PVC tarpaulin and glass curtain wall, ABS board, color steel sandwich board. The thickness and quality of these materials directly affect the safety and price of the tent. In the raw material level, the cost of good and bad is 15%-20% higher than the bad.

2. The impact of the production process on the price of the tent

The second is the production process, the quality of the production process is directly related to the beauty of the tent and the smoothness and convenience of use. The good tent is assembled and built. The main links such as disassembly will be very smooth and not easy to damage. The efficiency of disassembly is about 20% higher than that of poor workmanship, and the cost of good workmanship is 5% higher than that of poor workmanship.

3. The impact of inspection, testing, packaging and transportation on the price of the tent

Testing, packaging, transportation and use of finished products. Because the tent parts are assembled arbitrarily. This requires that the error of the same variety of parts must be controlled within the range of 2mm, so not only need to be inspected at any time in the production process, but also the final assembly inspection at the factory in order to find the problem in time. In addition, it is necessary to look at the number of tents to determine the packaging method is stowed or special car transport. Ensure that the product is not damaged during loading, unloading and transportation. Finally, in the link of use and construction, the supplier will send one person to guide the construction according to the customer's requirements, or the supplier will be responsible for all the construction. This charge accounts for about 5% of the total price.

4. The impact of production cost on the price of the tent

Third, the use cost of the production plant. Water, gas, electricity costs, machine dismantling costs, workers' wages costs. These costs account for about 15% of the sales price.

5. The impact of after-sales service on the price of the tent

The customer believes that we have purchased the company's products, and the customer will certainly lose and damage the parts in the subsequent use process. In order to ensure the normal use of customers, we will arrange spare parts production or personnel on-site service in the first time after receiving customer information. In addition, we will allocate part of the profit to product research and development to promote the upgrading of products to meet the needs of the market.

The above points are the composition of the sales price.

FAQ :

Q1.What kind of tent can you produce for me?

A1: We can produce different sizes of aluminum tents, such as 3m-55m modular clear-span tent, pagoda, gazebo tent, modular dome ,arcum,curved tent, hexagonal ,octagonal,decagonal tent, cable & pole tent, double-desk structure tent, combo structure tent.etc.)
